

8 Bar best-in-class air dryers from trusted brands | Air Flow Capacity 10 To 1000 M³/h engineered for maximum efficiency and durability

Our Product Introduction

more products please visit us on nitrogengeneratorsystem.com

Basic Information

- Brand Name: Air Dryer
- Certification: ISO90001
- Model Number: 0010
- Minimum Order Quantity: 1
- Price: \$100000
- Packaging Details: In Carton
- Delivery Time: The Complete Set Of Equipment Will Be Provided Within 45 Days After Receiving The Advance Payment.
- Payment Terms: 40% Of The Contract Amount Is Prepaid; 60% Of The Contract Amount Is Paid After The Goods Are Inspected And Approved Before Shipment.

Product Specification

- Dimensions: Varies By Model
- Machinery Test Report: Not Available
- Oe No: A0004300969 699387, 699387
- Scfm: 875
- Car Model: Truck
- Air Flow: 6.6m³/min
- Gas Type: Air
- Certifiion: ISO/TS16949:9001
- Highlight: **8 Bar air dryer, high capacity air dryer 1000 M³/h, durable industrial air dryer**

Product Description:

The air dryer is an essential component for maintaining the efficiency and longevity of air systems in trucks. Designed specifically for heavy-duty vehicles, this product ensures that the compressed air used within the truck's pneumatic systems is clean, dry, and free from contaminants that could cause damage or reduce performance. With a standard flow capacity of 6.6 cubic meters per minute (m³/min) and a SCFM rating of 875, this air dryer is perfectly suited to meet the demanding requirements of commercial trucks.

One of the standout features of this air dryer is its versatile drying methods. It supports refrigerated, desiccant, and membrane drying technologies, providing flexibility depending on the specific needs of the application. Refrigerated dryers work by cooling the air to condense moisture, desiccant dryers use moisture-absorbing materials to remove water vapor, and membrane dryers utilize selective permeability to separate moisture from the air stream. This multi-method approach ensures optimal performance in various environmental conditions and operational scenarios.

Compatibility is another key advantage of this product. It is designed to fit trucks and comes with OE numbers A0004300969, 699387, and 699387, making it a reliable replacement part that meets original equipment specifications. This guarantees that the air dryer will integrate seamlessly with the truck's existing air system, providing reliable and efficient drying without the need for extensive modifications.

Using a high-quality compressed air dryer like this one prevents moisture-related issues such as corrosion, freezing, and contamination in the air system. By removing water and impurities from the compressed air, it helps to protect air brakes, suspension systems, and other pneumatic components, ultimately enhancing safety and reducing maintenance costs. The consistent air flow rate of 6.6 m³/min ensures that the system maintains optimal pressure and performance even under heavy load conditions.

When it comes to selecting the best-in-class air dryers from trusted brands, this product stands out due to its robust construction, reliable operation, and extensive compatibility with truck models. Trusted by professionals in the automotive and transportation industries, it exemplifies the high standards required to keep commercial vehicles running smoothly. It combines advanced drying technologies with practical design features, making it an indispensable part of truck maintenance and operation.

In summary, this compressed air dryer delivers exceptional performance through its high SCFM capacity, versatile drying methods, and compatibility with key truck models. Whether you are looking to replace an existing air dryer or upgrade your system, this product offers a dependable solution that safeguards your vehicle's pneumatic systems from moisture-related damage. By choosing this air dryer, you invest in a product that embodies the best-in-class air dryers from trusted brands, ensuring your truck operates efficiently and reliably in all conditions.

Technical Parameters:

Car Model	Truck
Air Flow	6.6 m ³ /min
Drying Method	Refrigerated / Desiccant / Membrane
Dimensions	Varies By Model
Air Flow Capacity	10 To 1000 m ³ /h
Working Pressure	8 Bar
Description	Heavy Truck Spare Parts, featuring best-in-class air dryers from trusted brands, including Desiccant Air Dryers
Compressor Power	900 W
Year	Other
SCFM	875

Applications:

The Air Dryer, model number 0010, manufactured in Suzhou, China, is a high-quality heavy truck spare parts product designed to efficiently remove water vapor from compressed air. Certified with ISO90001, this industrial compressed air dryer is tailored to meet the demanding needs of various industrial applications where moisture-free air is crucial. With a working pressure of 8 Bar and an impressive air flow capacity ranging from 10 to 1000 M³/h, the Air Dryer ensures optimal performance in maintaining the integrity and reliability of compressed air systems.

Desiccant air dryers like the Air Dryer 0010 are essential in settings where compressed air quality directly impacts operational efficiency and equipment longevity. These dryers are widely used in manufacturing plants, automotive service centers, and heavy truck maintenance facilities to prevent moisture-related damage in pneumatic tools, air brake systems, and other air-operated machinery. By effectively removing water vapor from compressed air, the Air Dryer protects sensitive components from rust, corrosion, and freezing, thereby reducing downtime and maintenance costs.

This industrial compressed air dryer is ideal for applications involving heavy-duty trucks and commercial vehicles, where reliable air drying is critical for safety and performance. The Air Dryer comes securely packaged in carton and is available for immediate order with a minimum quantity of just one unit. Priced at \$100,000, it offers excellent value considering its robust construction and advanced drying capabilities. Delivery of the complete set of equipment is guaranteed within 45 days after receiving the advance payment, ensuring timely integration into your operations.

Payment terms for the Air Dryer model 0010 are structured to facilitate a smooth transaction: 40% of the contract amount is prepaid, and the remaining 60% is paid after the goods are inspected and approved before shipment. This approach ensures customer satisfaction and confidence in product quality. As an ordinary product in the market, the Air Dryer is a reliable and efficient solution for industries requiring high-performance compressed air drying systems.

Overall, the Air Dryer 0010 is an indispensable tool in various industrial scenarios, from heavy truck maintenance to complex manufacturing processes, where dry, clean compressed air is essential. Its ability to handle a wide range of air flow capacities and maintain consistent working pressure makes it a versatile and dependable choice for any application demanding superior air drying performance.

Customization:

Our Air Dryer product, model number 0010, is a high-quality desiccant air dryer designed to efficiently remove water vapor from compressed air, ensuring optimal performance for your truck's air system. Manufactured in Suzhou, China, this product meets ISO90001 certification standards, guaranteeing reliability and quality.

The Air Dryer features a powerful 900w compressor and comes with customizable dimensions to suit various models. Packaged securely in cartons, each unit is available with a minimum order quantity of just one, making it accessible for both small and large scale needs.

We provide comprehensive product customization services including tailored packaging and delivery. The complete set of equipment will be delivered within 45 days after receiving the advance payment. Payment terms are flexible, with 40% prepaid and the remaining 60% payable after inspection and approval before shipment.

As an ordinary product in our marketing lineup, the Air Dryer is ideal for truck applications, offering reliable performance in removing moisture from compressed air systems. Please note that a machinery test report is not available for this model.

Choose our desiccant air dryers to ensure your compressed air systems remain dry and efficient. Our dryers remove water vapor from compressed air, helping to prevent corrosion and damage to pneumatic equipment.
